

Fren N Petals Sales Analysis

1. Project Overview

The Festival Sales Analysis project focuses on analysing customer purchasing behaviour, product performance, and sales trends during different festival and occasion-based sales periods. The analysis was performed using Excel Pivot Tables and data visualization techniques to identify high-performing products, top-selling occasions, customer spending patterns, and city-wise sales trends.

The main objective of this project was to understand which products, occasions, and sales periods generated the highest revenue and to identify business opportunities for improving sales performance and customer engagement.

2. Dataset Summary

The dataset consists of three main tables used for analysing customer purchasing behaviour, order trends, and product performance during festival sales.

- **Customers Table:**
Contains customer-related information such as:
 - Customer ID
 - Customer Name
 - City
 - Customer Spending
 - Number of Orders
- **Orders Table:**
Contains transaction and order-related details such as:
 - Order ID
 - Order Date
 - Occasion
 - Quantity Ordered
 - Revenue
 - Day of Purchase
- **Products Table:**
Contains product-related information such as:
 - Product Name
 - Product Category
 - Product Revenue
 - Product Performance

The dataset was organized and analysed using Pivot Tables to summarize revenue, order quantity, customer spending, and sales trends across different dimensions

3. Business Problems Analysed

The project focused on answering the following business questions:

- 1) Which months generated the highest revenue?
- 2) Which products contributed the most sales revenue?
- 3) Which occasions generated maximum revenue?
- 4) Which cities recorded the highest number of orders?
- 5) Which days of the week had the highest sales?
- 6) What is the average customer spending per order?
- 7) Which products performed best during festival sales?
- 8) How does order quantity impact revenue generation?

4. Cleaning Data & Missing Values

- Organized raw sales data into structured tables.
- Checked for duplicate and missing records.
- Standardized product names, occasion names, and city names.
- Created Pivot Tables for revenue, orders, and customer analysis.
- Applied filters and slicers for interactive analysis.

5. Data Analysis using Excel

Performed business analysis using Pivot Tables to answer key business questions:

- (1) **Month-wise Revenue Analysis:** Compared monthly revenue trends and identified February as the highest revenue-generating month.

Monthly Sales Performance	
Row Labels	Sum of Revenue
January	₹ 95,468.00
February	₹ 7,04,509.00
March	₹ 5,11,823.00
April	₹ 1,40,393.00
May	₹ 1,50,346.00
June	₹ 1,57,913.00
July	₹ 1,35,826.00
August	₹ 7,37,389.00
September	₹ 1,36,938.00
October	₹ 1,51,619.00
November	₹ 4,49,169.00
December	₹ 1,49,591.00
Grand Total	₹ 35,20,984.00

(2) **Top Products by Revenue:** Identified Revenue by top-performing products.

Top Products by Revenue

Row Labels	Sum of Revenue
Exercitationem P:	₹ 96,701.00
Expedita Gift	₹ 88,944.00
Fugit Set	₹ 68,292.00
Magnam Set	₹ 1,21,905.00
Nihil Box	₹ 73,964.00
Grand Total	₹ 4,49,806.00

(3) **Occasion-wise Revenue Analysis:** Analysed which occasions generated maximum revenue.

Revenue Comparison between Occasions	
Row Labels	Sum of Revenue
All Occasions	₹ 5,86,176.00
Anniversary	₹ 6,74,634.00
Birthday	₹ 4,08,194.00
Diwali	₹ 3,13,783.00
Holi	₹ 5,74,682.00
Raksha Bandhan	₹ 6,31,585.00
Valentine's Day	₹ 3,31,930.00
Grand Total	₹ 35,20,984.00

- (4) **Customer Spending Analysis:** Calculated average customer spending and average orders per customer to understand customer purchasing behaviour.

Customer Spending Average Analysis

Average of customer Spending

₹ 3,520.98

- (5) **City-wise Order Analysis:** Identified cities with the highest order counts.

Top 10 Cities by Order ID	
Row Labels	Count of Order_ID
Bhatpara	18
Bidhannagar	21
Bilaspur	18
Dhanbad	28
Dibrugarh	21
Guntakal	20
Haridwar	24
Imphal	29
Kavali	27
North Dumdum	19
Grand Total	225

- (6) **Sales by Day Analysis:** Compared revenue generated across weekdays and weekends to identify peak sales days.

Sales by Days	
Row Labels	Sum of Revenue
Friday	₹ 4,75,447.00
Monday	₹ 4,61,670.00
Saturday	₹ 4,44,960.00
Sunday	₹ 6,28,138.00
Thursday	₹ 4,18,354.00
Tuesday	₹ 6,77,223.00
Wednesday	₹ 4,15,192.00
Grand Total	₹ 35,20,984.00

(7) Product Performance Analysis: Analysed product categories contributing the highest revenue during festival periods.

Sales Preformance by Products	
Row Labels	Sum of Revenue
Cake	₹ 3,29,862.00
Colors	₹ 10,05,645.00
Mugs	₹ 2,01,151.00
Plants	₹ 2,12,281.00
Raksha Bandhai	₹ 2,97,372.00
Soft Toys	₹ 7,40,831.00
Sweets	₹ 7,33,842.00
Grand Total	₹ 35,20,984.00

6. Dashboard in Power Bi

Finally, we build an interactive Dashboard in **Power BI** to represent insights visually.

7. Business Recommendation

- 1) Focus more marketing campaigns on high-performing occasions like Anniversary, Holi, and Raksha Bandhan to maximize revenue.
- 2) Increase inventory for top-selling products during festival seasons to avoid stock shortages.
- 3) Target high-order cities with location-based promotions and faster delivery services.
- 4) Improve sales during low-performing months using discounts, combo offers, and festival campaigns.
- 5) Analyse customer spending patterns regularly to create personalized offers and improve repeat purchases.
- 6) Promote high-performing products through bundled offers and festive packaging to increase average order value.
